AI Smart Estimator — App

This note covers where the Grazia Stones AI Smart Estimator build stands right now, what's happening in the next phase, and the payment needed to move into it — as per the milestone schedule in the signed Service Agreement.

What Happens Next

With the foundation (backend, admin panel, AI/AR engine) already built, the next phase moves the app from a working demo to a store-ready product using your real catalogue:

- **Real Product Listings** — loading your actual stone/tile catalogue (names, categories, pricing, photos) into the Admin Panel, replacing placeholder data.
- **AI/AR Fine-Tuning on Real Products** — calibrating the AI wall visualization and AR tile placement against your actual product images and dimensions, not sample data — this is what makes the preview look right for your specific stones/tiles.
- **Deployment** — moving the fine-tuned build onto the live backend/server so it runs as a real, working product rather than a local demo.
- **Testing** — full QA pass on Android and iPhone: AI visualization accuracy, AR placement, cost estimator, PDF quote generation, and checkout.

Payment Status — Deal Locked at ₹1,40,000

Milestone	Amount	Status
Milestone 1 — Advance	₹25,000	RECEIVED
Milestone 2 — Midway (AI/AR module demo — this phase)	₹50,000	DUE NOW
Milestone 3 — Delivery (after deployment, before store publish)	₹65,000	Not yet due

These three milestones total ₹1,40,000 exactly. No other item is included in or deducted from this figure.

REQUESTING NOW — MILESTONE 2

₹50,000

Toward core development: product listings, AI/AR fine-tuning, deployment, and testing

Balance After This Payment (Core Development Only)

Total Development Value (deal locked, excl. GST)	₹1,40,000
Received to date (Milestone 1)	₹25,000
This payment request (Milestone 2)	₹50,000

Balance Remaining (Milestone 3, on delivery) ₹65,000

Payment mode: UPI (raghav@ragspro) / NEFT / RTGS. GST charged extra @ 18% if applicable.

Third-Party & Operational Costs — Separate, Not Part of ₹1,40,000

These are platform/API costs, not RAGSPRO's development fee. Kept fully separate so the ₹1,40,000 above stays purely for development work.

Item	Cost	Status
Google Play Console + Apple Developer Program (App Store Connect) setup (one-time, both platforms, RAGSPRO handles registration)	₹15,000	DUE NOW
Google Gemini API — AI Visualization usage (billed directly to your own Google account, not collected by RAGSPRO)	₹3,000–₹7,000 / month	Starts once app is live

Gemini cost is usage-based (you pay only for what customers actually use) and is separate from both the ₹1,40,000 development fee and the ₹15,000 console setup — Google bills your account directly.

TOTAL TO SEND NOW

₹65,000

₹50,000 Milestone 2 (development) + ₹15,000 console setup (separate, not counted against the ₹1,40,000)

Optional Add-Ons — Available on Request

Not part of the ₹1,40,000 core build. These are proven upgrades other clients ask for once the base app is live — happy to scope any of these separately, only if you want them:

- **Multi-Language Support (Hindi + regional)** — Wider reach for customers who prefer browsing/estimating in their own language. ~₹8,000–₹12,000

- **WhatsApp Auto Lead Follow-Up** — Every new lead automatically gets a WhatsApp message with their quote, no manual follow-up needed. ~₹10,000–₹15,000

- **Web Version of the AI Estimator** — Same visualizer usable from a browser link, no app install, great for sharing with dealers/architects. ~₹20,000–₹30,000

- **Sales Analytics Dashboard** — See which designs get viewed/quoted most, dealer-wise performance, conversion trends. ~₹12,000–₹18,000

- **Loyalty & Push Notification Campaigns** — Repeat-customer rewards plus targeted push offers for new designs/sales. ~₹10,000–₹15,000
