GRAZIA STONES

AI + AR Visualization App — Full MVP Development Proposal

Prepared by: RAGSPRO

1. Where We Are

Phase 1 (Demo) is complete and live at grazia-stones.vercel.app, a 15+ screen premium Flutter app covering the full catalogue browsing flow, AR camera mock, AI visualization UI, cart, and dealer locator UI, built to Apple-level design standards to secure your internal approval.

This proposal covers **Phase 2: Full MVP**: turning the approved demo into a real, production-grade product with a live backend, real AI stone visualization, working AR on iOS + Android, and an admin panel your team can actually run the business from.

2. Why the Demo Isn't the Product Yet

- All data is currently mocked — 7 hardcoded stones, no real catalogue sync
- AI visualization is a static image overlay, not real wall detection or texture mapping
- AR camera is untested end-to-end on real devices; iOS build has an unresolved plugin conflict
- No backend — no leads, no orders, no dealer data actually persists anywhere
- No admin panel — your team can't add products, manage dealers, or see customer activity

None of this is a criticism of the demo: a demo's job is to sell the vision, not run a business. This phase closes that gap.

3. Full MVP — Itemized Scope & Pricing

Module	What You Get	Investment
Backend & Database	Real API layer, product/collection/category data model, auth, hosting	₹70,000 – ₹90,000
Real AI Visualization Engine	Wall detection + stone texture mapping via Replicate/Stability API (replaces static overlay)	₹80,000 – ₹1,10,000
Native AR — iOS + Android	Fix iOS CocoaPods/Firebase conflict, working camera + product overlay on real devices	₹50,000 – ₹70,000
Admin Panel	Product/collection/dealer CRUD, lead inbox, basic analytics dashboard	₹60,000 – ₹80,000

Dealer Locator & Lead System	Live Google Maps dealer network, quote-request capture into admin panel	₹30,000 – ₹40,000
QA + Play Store / App Store Deployment	Multi-device testing, store listings, submission & approval handling	₹40,000 – ₹50,000
Bug Fixes, Polish & Buffer	Post-QA fixes, edge cases, final UI polish pass	₹20,000 – ₹30,000
Total — Full MVP		₹3,50,000 – ₹4,70,000

4. Timeline

Stage	Duration	Deliverable
Backend + Data Model	Week 1–2	Live API, real catalogue data
Real AI + AR	Week 3–6	Working AI visualization, AR on real devices
Admin Panel + Dealer/Lead System	Week 7–9	Team can manage products, dealers, leads
QA + Store Deployment	Week 10–12	App live on Play Store & App Store
Buffer / Polish	Week 13–14	Final fixes, launch support

5. Payment Terms

- **40% advance** (₹1,40,000 – ₹1,88,000) to begin backend + AI engine work
- **30% at midpoint** — on AI + AR demo working on real devices
- **30% on delivery** — app live on both stores, admin panel handed over

6. Not Included (Future Phase)

- Multi-tenant / white-label platform for other stone brands
- CAD/BIM Architect Portal
- Payment gateway / online ordering
- Push notification campaigns, loyalty programs

These are covered under **Phase 3: Full Platform + White-Label (₹6,00,000 – ₹8,00,000)** — a separate proposal once the MVP is live and validated.
